## Our Airless Hybrid Tires!

Our hybrid tires have inner tubes made of polyurethane foam with excellent shock absorbercy instead of conventional air-filled tubes. This standard feature makes pumping air into the tires unnecessary. Easy to operate, the brakes last longer to ensure user safety.

Shrink-resistant high density polyurethane foam tube

Here's a detailed video of the comprehensive standard features of Grace Core!

[What a Difference! Our Standard Wheelchair Features!](#)

## Our Easy Dry Cushion with Excellent Breathability!

The seat upholstery is made of our mesh fabric specially designed to resist pilling. The cushion is made of foam. Highly breathable and moisture-wicking, the seat is comfortable to sit in.

Specially Designed Mesh Fabric

Foam Cushion

Easy dry cushion  
Weight: 0.5kg

## Our New Backrest Mechanism for Comfort Even After Hours of Sitting!

### ◆ Our Standard 56cm Backrest is the Tallest in the Industry!

Grace Core Backrest Height 56cm

NEXT CORE Backrest Height 46cm

The backrest is 10 cm higher than in our NEXT CORE series. The wider backrest supports the back to offer greater head stability.

Grace Core's Back Frame

NEXT CORE's Back Frame

The backrest frame curves further towards the back than our NEXT CORE series, making it more relaxing to lean back in.

Here's a detailed video of the secrets of Grace Core backrests!

[What a Difference! The Secrets of our Backrests!](#)

### ◆ Our Backrest Upholstery with Triangular Pad for Outstanding Back Support & Maneuverability!

Gaps form around the shoulders when applying pressure to the back frame. The triangular pad attached to the upper section of the backrest cover seat supports the back, particularly the spinal column, to maintain the gap.

Part with Triangular Pad for Support

## Comfortable even after hours of sitting!

The high backrest fits the entire back for proper support. This dramatically reduces the pressure on the back and seat areas.

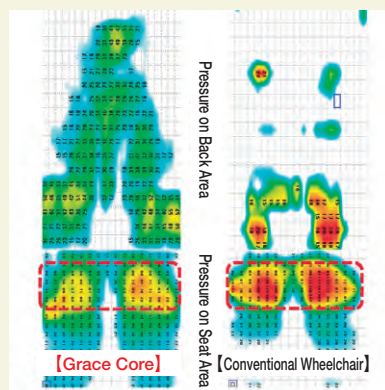

[Grace Core]

[Conventional Wheelchair]

Users can move their arms more easily thanks to the triangular pad!

The backrest pushes on the shoulder blades. Users cannot pull back their arms...

The backrest with triangular padding properly supports the spinal column. The backrest does not push on the shoulder blades, so users can easily move their arms!

[Grace Core]

[Conventional Wheelchair]

## Further Upgrades to Grace Core's Adjustable Backrest Upholstery!

### ◆ Better backrest adjustment for a better fit

In our NEXT CORE Series, there is a gap between the 2nd and 3rd belts from the top. This requires careful placement of the belts.

Backrest Belts of NEXT CORE

Backrest Belts of Grace Core

Backrest belts with less gaps in between and a frame which better fits the curvature of backs **makes it possible to adjust the backrest like a pro!**

## Comes newly equipped with innovative gluteal support belts!

### ◆ The gluteal support belts prevents gaps from forming

It is possible to minimize pressure on the hipbone by reducing the gap between the posterior pelvis and the seat to support the entire buttocks. This also prevents the pelvis from tilting backwards.

Image of gluteal support belts

Pelvic support  
Gluteal support

Just like NEXT Core, Grace Core comes with pelvic support to prop up the pelvis from all directions. Our new feature - the gluteal support belts - similarly provides the lower pelvis further support.

Here's a detailed video of the secrets of Grace Core backrests!

[What a Difference! Tips on Adjusting Backrests!](#)

## Easily Adjust the Seat Depth on the Spot!

The seat depth can be easily adjusted to 38cm or 34cm without any tools. Adjust the seat depth to a size according to the user's height and usage right on the spot.

Seat Depth 38cm

Seat Depth 34cm

Here's a detailed video of the secrets of Grace Core seats!

[What a Difference! The Secret of our Seats!](#)

[Grace Core]

[Conventional Wheelchair]

Here's a detailed video of the secrets of Grace Core footrests!

[What a Difference! The Secret of our Footrests!](#)

## Our 90 Degree Footrests!

It is easy to sit in the wheelchair with the footrests positioned closer in towards the user like in a chair.

Wonderful Features of NEXT CORE - Wide!

Position & Angle Adjustable Footrest Structure

The position and angle of the footrests are adjustable. Users can sit with their feet closer in towards themselves, or adjust the angle to find a position better for their joints.

Height Adjustable Armrest Structure

The armrest is adjustable according to the user's physical condition and the thickness of the cushion used. The armrest height is 4-level adjustable: 25 • 27 • 29 • 31 cm.

Puncture-Proof Tires with Excellent Shock Absorption

Our tires are more shock absorbant than conventional puncture-proof tires (high polymer tires). Hybrid tires are puncture-proof tires with the comfort level of air tires.

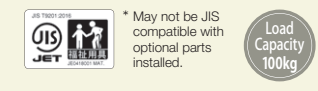

\* Refer to the chart of options available on P22.

Lead a More Active Life with NEXT CORE - Spin

The footrests are about 12cm closer towards the user than a conventional wheelchair to prevent the risk of buttocks sliding forward when putting the user's feet up onto the footrests. It is easier to keep the pelvis untitled, and to find a good position for eating or being active.

# 3 Tips for Sitting Stability on NEXT CORE

Independence Begins with a Stable Posture.

## A Frame That Doesn't Touch the Shoulders! Our Backward Curving Backrest Frame

The backrest frame curves largely backwards to prevent the frame from coming into contact with the user's shoulders. Combining this with backrest adjustment features allows even those with rounded backs to sit as far back into their seats as possible while keeping their backs straight.

## Supported from Both Sides! Pelvic & Core Stability

The gap between the user and the wheelchair is considerably reduced by the frame and seat. The added lateral support along with the backrest and seat stabilizes the posture of users who tend to lean towards one side.

For Illustrative Purposes Only

## Independent Left-Right Backrest Adjustment! Supports Good Posture from 3 Directions with Our 3D Sling Seat

Straight on, from the side and the top. Each NEXT CORE wheelchair is equipped with a 3D Sling Seat backrest. The left and right sides of the backrest are independently adjustable. The backrest stabilizes the posture of users with rounded backs or scoliosis.

A Woman with Scoliosis

# How to Adjust the Backrest Upholstery (Recommendation)

\* The method explained below is just one example.  
We recommend adjusting the backrest with the cooperation of a medical care professional.

## 1. Set Up Before Adjusting the Backrest Upholstery

- Belt①: Adjust along the neutral line  
\* Set slightly loose for users with curved backs.
- Belt②: Fasten the belt on both sides of the seat.
- Belt③: Fasten the belt on both sides of the seat.
- Belt④: Adjust along the neutral line.

Tutorial videos on adjusting the backrest available on YouTube.

- 2. Sit straight back in the seat. The buttocks should be as far back in the seat as possible. Adjust the footrest length.  
(Unfastening the belts during the initial settings provides enough give for any back curvatures.)

- 3. Fasten belt ①.  
Decide on the approximate position of the user's head.

- 7. Readjust belts ③ and ④.  
Readjust belt ① if necessary.

- 4. To prevent the pelvis from tilting backwards, fasten belt ③ in the direction of the pelvis (posterior superior iliac spine).

- 5. Fasten belt ④ diagonally downward to ensure the seat is a good fit for the buttocks.

\* We recommend installing anti-tip bars (fall prevention) with the oxygen tank holder. Please be careful of the wheelchair toppling backwards.

### Hybrid Tires (Puncture-Proof)

This option makes pumping air into the tires unnecessary. These puncture-proof airless tires are practically as shock absorbent as air tires. The inner tubes are highly durable with a service life of about 5 years (excluding tire wear).

\* The tire in the photo is different from that of NEXT CORE wheelchairs.

### NEXT CORE Walking Cane Holder (Large)

### Rear IV Pole Set

### For NEXT CORE Oxygen Tank Holder

\* We recommend installing anti-tip bars (fall prevention) with the oxygen tank holder. Please be careful of the wheelchair toppling backwards.

\* Foldable oxygen tank holders are also available.

### For NEXT CORE Anti-tip Bars (Fall Prevention) with Casters

### Brake Extension Bar (5cm • 10cm)

\* 10cm in the photo

### For NEXT CORE Spoke Cover (22-Inch, Clear Only)

### Seat Belts for 3D Sling Seats

Image of Installation on Chest (For Illustrative Purposes Only)

\* Please avoid using the seat belt for restraining purposes.

### For NEXT CORE Mudguards Self-Propelled • Attendant-Propelled (Made of Resin)

Features of Models CM-251HB and 261HB

Flip-Up Armrest

It is easier to transfer from the wheelchair to beds or toilets by flipping up the armrest. It alleviates strain on the attendant.

Hybrid Tires (Puncture-Proof)

Equipped with special shock absorbent inner tubes, this option makes pumping air into the tires unnecessary.

\* Material: Polyurethane Material (PU Material)

Swing-Away & Detachable Footrests

The footrests can be swung away to shift the wheelchair closer to beds and toilets for easier transfers. This feature is also useful for foot propelling.

Features of Models AR-501, 511B and 601

Flip-Up & Detachable Armrests

It is easier to transfer from the wheelchair to beds or toilets by flipping up the armrest towards the rear. It is also detachable to alleviate strain on the attendant.

(AR-501, 601)

Swing-Away & Detachable Footrests

The footrests can be swung away to shift the wheelchair closer to beds and toilets for easier transfers. This feature is also useful for foot propelling.

Shallow Seat Depth

The shallow seat depth is ideal for shorter users to sit as far back as possible in the seat and to maintain a more stable sitting posture.

3D Cushion (Standard Feature)

Size Adjustment Functions

Seat Width Adjustment

Adjustable by Switching to an X-Frame (Sold Separately)

The seat frame is fixed using e-Pins, so the seat width is adjustable (by switching to an X-frame) without using any tools. The tipping unit is specially designed into a form easy to step on.

Insert the pin inside the hole of the frame and rotate to lock securely.

Remove ①. Pull ② out in the direction of the arrow.

Seat Height Adjustment

The adjustable caster fork is used to finely adjust the front seat height.

Set the caster installation spacer above or below the frame to roughly adjust the front seat height.

Backrest • Seat Upholstery Adjustment

The backrest and seat upholstery can be adjusted to fit each user's posture with separate belt buckles.

Height Adjustable Armrests

Armrests tend to be too low when using cushions with the wheelchair. This feature is useful for adjusting the armrests to a comfortable height. The armrests are made of high-strength resin for increased durability and precision.

Main Features of AR-901

Swing-Away & Detachable Footrests

The footrests can be conveniently swung away to shift the wheelchair closer to beds and toilets for much easier transfers. Remove the footrest on the healthy side of the user's body for a comfortable set-up for foot propelling.

Flip-Up Armrest

This features makes lateral transfers in and out of wheelchairs easier. The armrest is made of high-strength resin for increased durability and precision.

Detachable Armrest

Lateral transfers in and out of wheelchairs are made even easier for attendants by flipping up and detaching the armrest. (Mostly for two-person assist)

Drumbrakes

The drumbrakes are used by attendants to brake by controlling the wheel axle. This braking system is useful for riding safely on slopes and streets wet from the rain. Requiring little power input to brake, this feature is especially convenient for female and elderly attendants. (A standard feature on self- and attendant-propelled models)

Features of Models MW-SL31B, SL41B, SL5B and SL6B

Flip-Up Armrest

It is easier to transfer from the wheelchair to beds or toilets by flipping up the armrest towards the rear. It is also detachable to alleviate strain on the attendant.

Swing-Away & Detachable Footrests

The footrests can be swung away to shift the wheelchair closer to beds and toilets for easier transfers. This feature is also useful for foot propelling.

Drumbrakes

This standard feature is for riding safely on slopes and streets wet from the rain.

Features of Models MW-SL5B and SL6B

Height Adjustable Armrests

The armrest can be adjusted to a height suitable for the user. The armrest height can also be adjusted according to the thickness of the cushion used. (235mm~275mm/5 levels of adjustment)

Invertable Pads

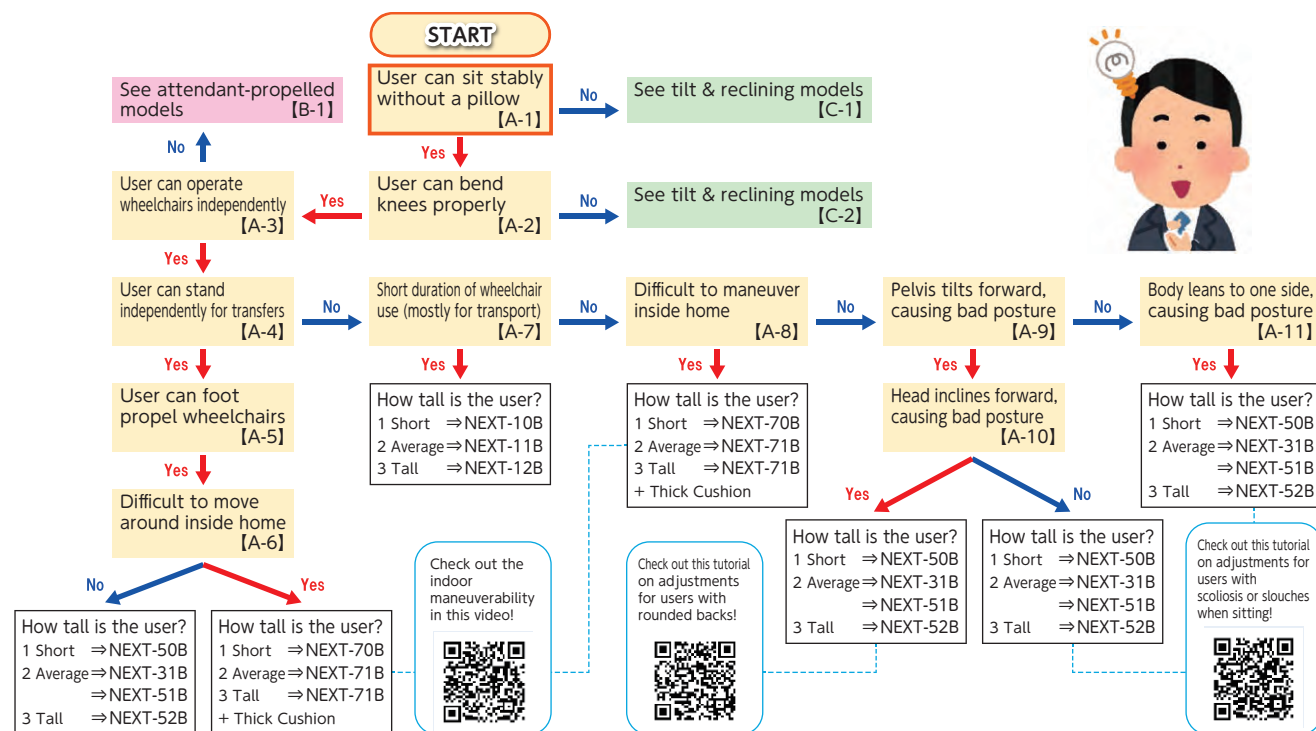

The direction of armrest pads can be inverted from left to right, and vice versa. The armrest can be used as a support for users to stand up independently by extending it towards the frontside of the wheelchair.

Reclining Angle	Tilt Angle
90°~110°	0°~25°

\* The Swing-Away & Elevating Unit B (90 Degree) for exclusive use with My Tilt - Mini 3D is also sold individually.  
\* Please note that alterations are unavailable for this model.

Easy to Use Even for Shorter Users! Adjustable Features of My Tilt - Mini 3D!

● A Seat Shorter Users Can Sit Far Back In Shallow Seat Depth (35cm)

[Deeper Seat] The back of the knees touch the seat. The user cannot sit far back.  
[Shallower Seat] The user can sit far back to reduce the risk of sacral sitting (slumping).

● Tucked in as Much as Possible 90 Degree Footrests (Position • Angle Adjustable)

Users unable to extend their knees or suffering from malformation of feet joints (equinus contracture) can properly position their feet on the footrests.  
\* The footrests can be slid 5cm forward from the position closest to the user.

Conventional Product Minus 10.5cm

● Freely Adjustable Back & Forth • Left & Right from a Low Position Snake Headrest

The headrest is adjustable to a low position optimal for shorter users. Thanks to this new structure, the position and angle headrest can be adjusted left & right • back & forth simultaneously.

● Supports Stable Sitting Positions for Users with Rounded Back Forward-Folding Backrest Frame (Positive Feature)

The Forward-Folding Backrest Frame is a popular mechanism in our OASIS - Positive Series. It is easier to reduce the gap between the backrest and the shoulder girdle which tend to form for users with rounded backs. This stabilizes the head to neck areas and makes it easier to find an optimal eating position.

My Tilt - Compact 3D

Front Seat Height **430 mm (450) mm** \* Seat cushion not included.  
**MH-CR3D** Manufacturer's Suggested Retail Price (Non-Taxable) **¥192,000** Caster x Rear Wheel [Inches] **6 × 12 (12 × 13/8)** [Folded] 325 835 Weight **24.5kg**

\* The factory setting of front and rear seat height is 430mm.

Reclining Angle	Tilt Angle
90°~125°	0°~30°

3D Cushion (Standard Feature)

1. Left & Right Side of Backrest Independently Adjustable
2. Pelvis & Core Support Frame
3. Backward Curving Backrest Frame

Duralock • Mini Tackle Brake (Standard Feature)

It is possible to brake the wheelchair from both the front and back.

Swing-Away Footrests (Standard Feature)

Up until now, swing-away footrests were an option on My Tilt wheelchairs. Now they are a standard feature.

\* The options of swing-away & elevating units can also be installed.

Tilt & Reclining Feature

30° Tilt

30° Tilt  
130° Recline

Equipped with features the equivalent of current My Tilt wheelchair for similar sitting stability.

Fold for an Even More Compact Wheelchair!

The wheelchair can be loaded onto kei cars (small cars). It makes going out e.g. to the hospital more convenient.

Options

■ Swing-Away Footrests & Elevating Unit A (Standard)  
This unit can be adjusted for users with limited movement in their knees.  
Suggested Retail Price (Non-Taxable) **¥16,000up**  
\* The added weight is about 2.0kg.  
\* If this option is selected at the time of purchase, the standard swing-away feature is not included.

■ Hybrid Tire (Puncture-Proof)  
This option makes pumping air into the tires unnecessary. These puncture-proof airless tires are practically as shock absorbent as air tires.  
Suggested Retail Price (Non-Taxable) **¥6,000up**  
\* The added weight is about 0.4kg.

■ Oxygen Tank Holder for MH-CR3D  
\* Also Compatible with MH-SR Series  
Suggested Retail Price **Discretionary Price**

■ EXPOLE  
Suggested Retail Price **Discretionary Price**

■ Snake Headrest  
Suggested Retail Price (Non-Taxable) **¥40,000up**

■ Seat Belts for 3D Sling Seats  
Suggested Retail Price **Discretionary Price**  
\* Please avoid using the seat belt for restraining purposes.

## Super User-Friendly Features on My Tilt - Grand!

### Lift-Up Unit

\* MH-GRL, MH-GRL-SE Only

**Lift-Up Bar**

When the lift-up bar is lowered, the wheels float up.

This enables lateral movement and in-place rotation!

### Back & Forth, Left & Right Integrated Footbrake

**Pinch**

The brake can be activated · deactivated by stepping on any of the back · front · left · right brakes.

### One-Touch Height Adjustable BJ Headrest

**Pinch**

One touch is all it takes to adjust the headrest height. It is very easy to adjust the headrest position after transferring onto the wheelchair.

### Slope Rollers

Even when the underside of the footrests bump into the slope, the slope rollers rotate to help to keep moving up the slope. They lower the risk of damages.

## Options

**Snake Headrest**

Suggested Price (Non-Taxable) **¥40,000 UP**

**Oxygen Tank Holder for MH-GR**

\* Incompatible with MH-GRL, MH-GRL-SE Series

Suggested Price **Discretionary Price**

## 3D Model 3 Tips for Sitting Stability

### 1 Backward Curving Backrest Frame

The backrest frame curves largely backwards to prevent the frame from coming into contact with the shoulders.

Conventional Backrest Frame      My Tilt - Compact 3D

The user can sit comfortably by reducing the pressure on the shoulder blades. This alleviates pressure to the abdomen.

### 2 Core Support Frame

This support wraps itself around the user's pelvis to hips from both sides. It stabilizes the sitting position of users who tend to incline to one side.

Image of Core Support Frame (For Illustrative Purposes Only)

### 3 3D Support for Proper Sitting Positions! 3D Sling Seat

\* The 3D Sling Seat is a registered trademark of Deai-Kobo, LLC.

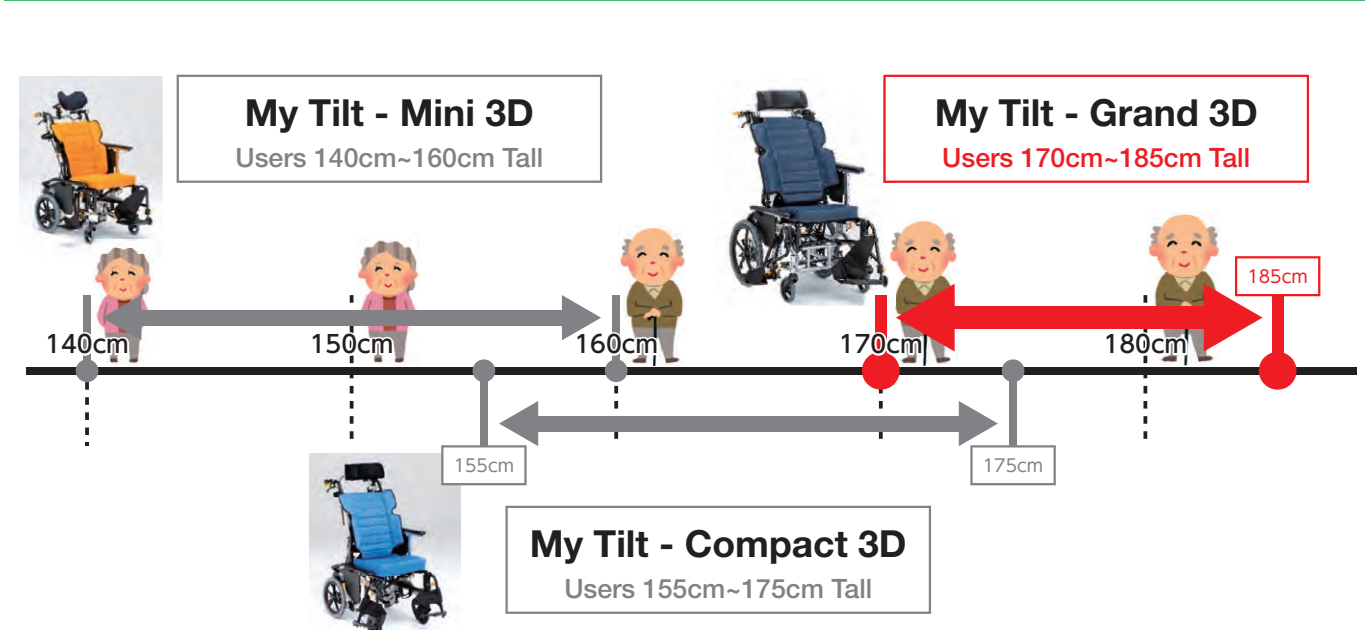

**[Comparing the Pressure from Conventional Seats and 3D Sling Seats]**  
The backrest properly supports the entire back to reduce pressure on the buttocks.

Belts can be fastened only where the user needs support

Belts can be loosened only where they need to be

Conventional Seat      3D Sling Seat

## My Tilt Series: Sizing Guide

Swing-Away & Elevating Unit

\* The footrests are detachable once swung out.

The elevating feature allows the footrests to be adjusted for users with limited movement in their knees.  
\* A standard feature of MH-VR-SE.

Valuable Features on a Budget. Our Original My Tilt Wheelchair with Highly-Demanded Standard Features.

● Hybrid Tire (Puncture-Proof)

Pumping air into these puncture-proof tires is unnecessary. They are always safe to ride on.

● Back & Forth Interlocking Footbrakes

The brake can be easily activated · deactivated just by stepping on any of the back · front · left · right brakes without crouching down.

● BJ Headrests

Freely adjust the angle and its left & right · back & forth · up & down position of the headrest according to the position of the user's head.  
\* Pillow Shape: BJ- B Type (Small Concave) Standard

■ Oxygen tank holder for MH-VR

Suggested Price  
**Discretionary Price**

● Drumbrakes

This brake is for stable control even in sloped areas.

● Adjustable Backrest Upholstery

The backrest upholstery can be adjusted by fastening belts according to the shape of the user's back.

\* We recommend users with curved and uneven backs our wheelchairs with 3D sling seats for independently adjustable left and right sides.

## 1 Interlocking Tilt & Reclining System

Reclining only engages the pelvic area to tilt to prevent the user from sliding forward. Minimal friction occurs between the backrest and back when reclining. The user will more likely maintain good posture even after repeated reclining with this mechanism.

## 2 Choice of Headrest Shapes

Choose between two BJ-A and BJ-B headrests.

BJ-A  
(Large Concave)

The headrest is largely concave. The head can be positioned far back for good stability.

BJ-B  
(Small Concave)

The headrest features a shallow concave. It is easier for the user to move the head.

## 3 Height Adjustable Headrest Pipe

Choose between our straight and curved-back models.

Straight Model

Curved-Back Model  
(80mm Bend)

## 4 BJ Headrest

The angle and back & forth position of the headrest can be adjusted. Position the headrest for a sitting position with the user's chin tucked in to reduce the risk of aspiration.

## 5 Swing-Away & Detachable Footrests

The footrests can be swung away to shift the wheelchair closer to beds and toilets for easier transfers. This feature is also useful for foot propelling.

## 6 Adjustable Backrest Upholstery

The backrest upholstery can be adjusted to fit the user's posture for more comfortable seating.

## 7 Angle & Width Adjustable Footrests

Slide the footrests left and right to ensure no gaps form between each footrest. This is especially useful for modular wheelchairs with adjustable seat widths.

## 8 Forward-Folding Joint on the Upper Section of the Backrest (OS-11TRSP·12TRSP)

Equipped with our newly designed forward-folding joint, the upper section of the backrest is curved forward to enable the entire backrest to support an active forward-leaning posture. Combining this with OASIS double reclining has remarkably improved its body pressure distribution performance.

## 9 Equipped with Footbrakes (Duralock) [Attendant-Propelled Model Only]

The drumbrake is coupled with the footbrake for more stable braking control.

## 10 Ultra-Compact

The total width of the Attendant-Propelled model is 530mm. That of the self-propelled model is 570mm. Thanks to the compact design, both models are excellent for home use.

\* The armrest height is 6-level adjustable at 20mm increments.  
\* The headrest is not included in the total height of the wheelchair.  
\* The seat cushion height is 50mm.  
© Specifications are subject to change without prior notice for continual product improvement.

Interlocking	
Reclining Angle	Tilt Angle
90°~115°	0°~25°

Compact Size of Total Width 530mm

This ultra-slim reclining wheelchair has a total width of 530mm. It is easy to operate in narrow spaces. Remove the seat cushion and headrest when folding the wheelchair up for storage.

\* Refer to the chart of options available on p.53.

Standard Features of the OASIS Series

New Mechanism to Prevent Forward Sliding & Relieve Abdominal Pressure

Reclining only engages the pelvic area to tilt to prevent the user from sliding forward. Minimal friction occurs between the backrest and back when reclining. The user will more likely maintain good posture even after repeated reclining with this mechanism.

Adjust the Headrest Angle & Position for Better Eating Posture

The angle and back & forth position of the headrest can be adjusted. Position the headrest for a sitting position with the user's chin tucked in to reduce the risk of aspiration.

\* Footrest length: distance between the footrests and seat

\* The dimensions are based on the reclining angle at 100° on a cushion.

\* The armrest height is 5-level adjustable at 20mm increments.

\* The footrest length is 3-level adjustable at 20mm increments.

© Specifications are subject to change without prior notice for continual product improvement.

Reclining Angle

100°~170°

\* The total length is 1,800mm when the reclining angle is at 170°.

Features of Escort

Reclining Backrest Interlocked with Elevating Legrests

The backrest can be reclined smoothly without levels. The reclining angle can be adjusted to an almost fully flat mode. This model is recommended for heavily handicapped users on bedrest.

Hybrid Tires (Puncture-Proof Tires)

These puncture-proof tires are a standard feature. This option makes air pumping unnecessary.

5-Level Height Adjustable Armrests

The armrests can be lowered to the same height as the seat. Thanks to this feature, transferring in and out of the wheelchair is much easier. This alleviates strain on the attendants. (The armrest height is 5-level adjustable: 0mm, 180mm, 200mm, 220mm, and 240mm.)

Features of Elise

Tight turns are possible even in narrow spaces with this lift-up feature.

Normal

● Lower the lift-up bar.

Lift-Up

● The safety wheels lower to lift the rear wheels up.

This feature enables lateral movements. The wheelchair can be easily placed right next to the bed.

There is no need to repeatedly reposition the wheelchair when transferring onto the bed.

Tilt & Reclining Mechanism to Maintain a Relaxing Posture

● 45° Recline · 15° Tilt

● Full Recline

Footrests

The footrests can be folded backwards to free up space for assistance, such as when loading/unloading the wheelchair.

Armrests

The armrests can be lowered to the same height as the seat. Assistance is made easier. The armrest is 10-level adjustable to a height appropriate for the user's body type and posture. (0 · 40~240/25mm increments)

\* Range of reclining angle 100°~175°, range of tilt angle 0°~30°

1.2.3 Ways LUUK is User-Friendly!

Feature 1 Wide Frame Structure with Wide Footrests

Thanks to the wide frame structure with wide footrests, there is enough space for users to place both feet even with braces or knee separators. It is easier and safer to transfer into the wheelchair.

Feature 2 Safe & Secure Design with Less Risk of Falling.

The footrests are positioned closer to the user than the casters. Even when the user steps onto the footrests, the wheelchair does not easily topple over with this highly safe design.

Feature 3 3D Sling Seats and 90 Degree Footrests for Good Posture.

- 3D Sling Seat  
The shape of the frame and seat easily fit the curvature of the user's back to properly support the entire back.
- 90 Degree Footrests  
The footrests are positioned to allow users to sit comfortably with their feet tucked closer in.

Modular Features for Long-Term Use!

### Main Features of Tight Turn Jr.

#### J Tackle Brake (For TT-Jr Only)

The brake shoes are placed further towards the back to prevent brake-shoe-related injuries while self propelling.

#### The wheelchair can be compactly folded.

Side View

Front View

\* The spoke cover is an option.

#### Minimum Turn Radius 510mm

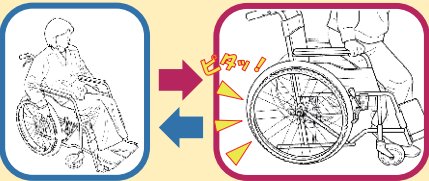

Wheelchair with Automatic Braking Device

Auto Break Series

The Auto Break Series are an assistive device which prevents falls by automatically locking the rear wheels of the wheelchair even when the user abruptly stands up without engaging the brake lock. Please make sure to use the parking brake on the wheelchair when transferring on and out of the wheelchair.

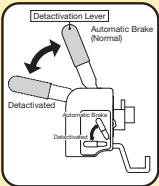

Feature 1

The lock deactivates when sitting down!  
The brake activates when standing up!

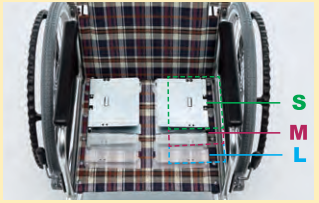

Feature 2

The wheelchair can be moved around without a user sitting on it. The automatic braking device can be deactivated using a lever.

Feature 3

Users can select the plate size.
